

Stations Projects Delivered into Customer Service

Summary of Major Station Programme Achievements

Over the last eight Years, the Major Stations Programme has successfully delivered six Major Station Programmes into passenger service with a total combined value of just over £2bn. These works have transformed key, complex major stations, improving safety, ingress and egress times, capacity, operation, ambience and step free access. The Major Stations Programme has received multiple awards for innovation, safety and the environment.

Victoria Station Capacity Upgrade

At Victoria, we have built a new north ticket hall and 300 metres of subways and have increased the size of the south ticket hall by 50 per cent. Step-free access to all platforms is now meeting the needs of the 83 million customers (around 105 million when interchange flows are included) who use the station each year.

The project was complete in December 2018.

Bank Bloomberg

Alongside the Bloomberg Place site redevelopment next to Walbrook, we have built a new Bank station entrance for the Waterloo & City line with connections to the existing concourse. The station 'box' was constructed by Bloomberg on our behalf.

The entrance opened in March 2019.

Bond Street Station Capacity Upgrade

We have increased capacity to accompany the increased traffic from the Elizabeth line. This includes new lifts for step-free access, more escalators and a new entrance to the north side of Oxford Street.

The enlarged station, with a new entrance and ticket hall, and step-free access from street to platform, was opened to customers in November 2017.

Tottenham Court Road Station Capacity Upgrade

The project upgrade reduced congestion and provided step-free access and Crossrail interchange, as well as a larger ticket hall, new escalators, and connections to all lines with entrances at street level and plaza.

The modernisation of the station which took seven years, opened February 2017.

Vauxhall Station Upgrade

The project reduced congestion and queuing at Vauxhall station through increased station capacity and reduced the risk of unplanned station closures. The project delivered additional gateline and ticket hall capacity and step-free access from ticket hall to platform level.

The project was completed in Summer 2016.

Paddington Bakerloo Line Link

We have constructed a new step-free pedestrian walkway tunnel at Paddington to link the Bakerloo line platforms with the new Elizabeth line station. Two new escalators and a new lift have also been installed.
